AI Search Optimization With Clear Action

Overview – October 2025

Younes Slaoui, Co-founder & CEO

Houda Slaoui, Co-founder & CTO

Make AI Recommend You

2030

2020

The Problem: Answer Engines Are Replacing Search

- 10% of U.S. internet users now turn to Answer Engines (ChatGPT, Perplexity, Claude) first for search
- Instead of scrolling through blue links, consumers simply ask a question and get the answer
- The New Problem: Businesses have no visibility into what AI is saying about them—and no proven way to influence it

What AI Is Saying About Your Brand

Opaque, Unpredictable, and Exclusive

Opaque & Unpredictable	Accelerating Divergence
A black box with probabilistic outputs, no longer pre-determined.	AI search is evolving unpredictably and becoming more complicated everyday.

Exclusive	Hyper-Personalized
AI references limited sources. If you're not included, you're invisible.	Memory, voice, and behavior change the landscape of search.

"Our top of funnel is getting completely crushed because we were so reliant on Google, but a ton of people have switched to AI search and we aren't there yet"

– Tyler Hogge, Pelion Ventures

Solution

Find the Gaps, Then Fill Them

Two-Phase System:

Phase 1: Analysis Engine

- Run 1000+ customer queries through AI search engines
- Measure client's current visibility (typically 0-30%)
- Identify which sources influence AI's responses the most for each query

Phase 2: Action Generation

- Create publication-ready content (blogs, PR pitches, directory profiles, community thread responses)
- Target the exact sources AI engines rely on
- GEO optimized on-brand content
- Deliver 100+ actionable assets in 5 days

Unlike monitoring-only tools, BrandTrend both finds gaps and produces publication-ready actions that AI engines actually cite. No other competitor provides clear, targeted, executable action.

Market Opportunity: A New MarTech Category Is Emerging

The Shift:

- 84% of Google search queries are now influenced by generative AI features (2025)
- U.S. SEO SaaS market: \$20.8B (2024) → \$35.9B (2030)
- Estimated GEO (Generative Engine Optimization) market: \$17.7B (2024) → \$30.5B (2030)

Why Now:

- Traditional SEO focused on ranking in blue links
- GEO focuses on being cited in AI-generated answers
- No dominant player has emerged yet—the category is wide open

Source Notes: Grand View Research (SEO market), Marketing AI Institute (84% stat)

Startup Model: Service-First, Then Agentic Platform

Phase 1 (Current): Semi-Manual Delivery Service Using Internal Tools

- Analysis Report: \$2,500 (20 prompts analyzed, gap map, priority list)
- Full Service: \$7,500 (full prompt analysis + 100 publication-ready action packets)
- Managed Service: \$10K/mo (weekly optimization and monitoring, 200+ action packets per month)

Phase 2 (Months 2-6): Autonomous GEO Platform

SaaS platform where specialized AI agents continuously monitor, learn, and optimize a brand's visibility across answer engines, connecting proprietary data, real-time gap detection, and live content generation via deep agentic research, and AI journalists that collect data from brand's customers for defensible content.

- Continuous Monitoring: AI agents receive detect new visibility gap alerts, strategize, and execute in real time.
- Adaptive Content Creation: context-fed agents adapt to changes in AI's responses to make sure brand is always at the top.
- Self-Optimizing System every cycle measures impact and refines the next actions automatically.
- Human in the loop can provide the system with valuable new data, insights, or emotional feelings.

Funding

- Seeking \$1M-\$1.5M seed round to hire 2-3 engineers and transition to autonomous platform
- Open to conversations, and planning partnerships with other startups in the category

Founders

- Computer science senior at the University of New Mexico
- LLM expert, experience at New Mexican biotech company (Indica Labs) and national lab (LLNL)
- Startup operator: in-seat food delivery for stadiums (Peanut)

- Computer science junior at the University of New Mexico
- Front-end software engineer at SWEFC
- Software engineering intern at Benco Dental
- DOE cybersecurity intern at Savannah River National Laboratories

Thanks for your time
