SCHEDULING DONE
SMART

Problem

1 - 1.5 YEARS

wait time reached for dermatology appointments in NM

20 / DAY

Americans die each day from melanoma

36 DAYS

average wait time for dermatology appointment

Current solutions fail: Hiring more physicians ignores the pipeline crisis. Generic telehealth can't handle complex skin conditions that require in-person clinical judgment.

Our Solution

01

PATIENT INTAKE

Photo upload + structured symptom questionnaire.
Mobile-friendly, accessible anywhere.

02

URGENCY SCORE

Platform pulls existing medical records for better context. Proprietary algorithm assigns clinical urgency score.

03

SMART SCHEDULING

System suggests optimal appointment based on urgency + appointment duration. Dermatologist receives priority queue with case summary.

Traction

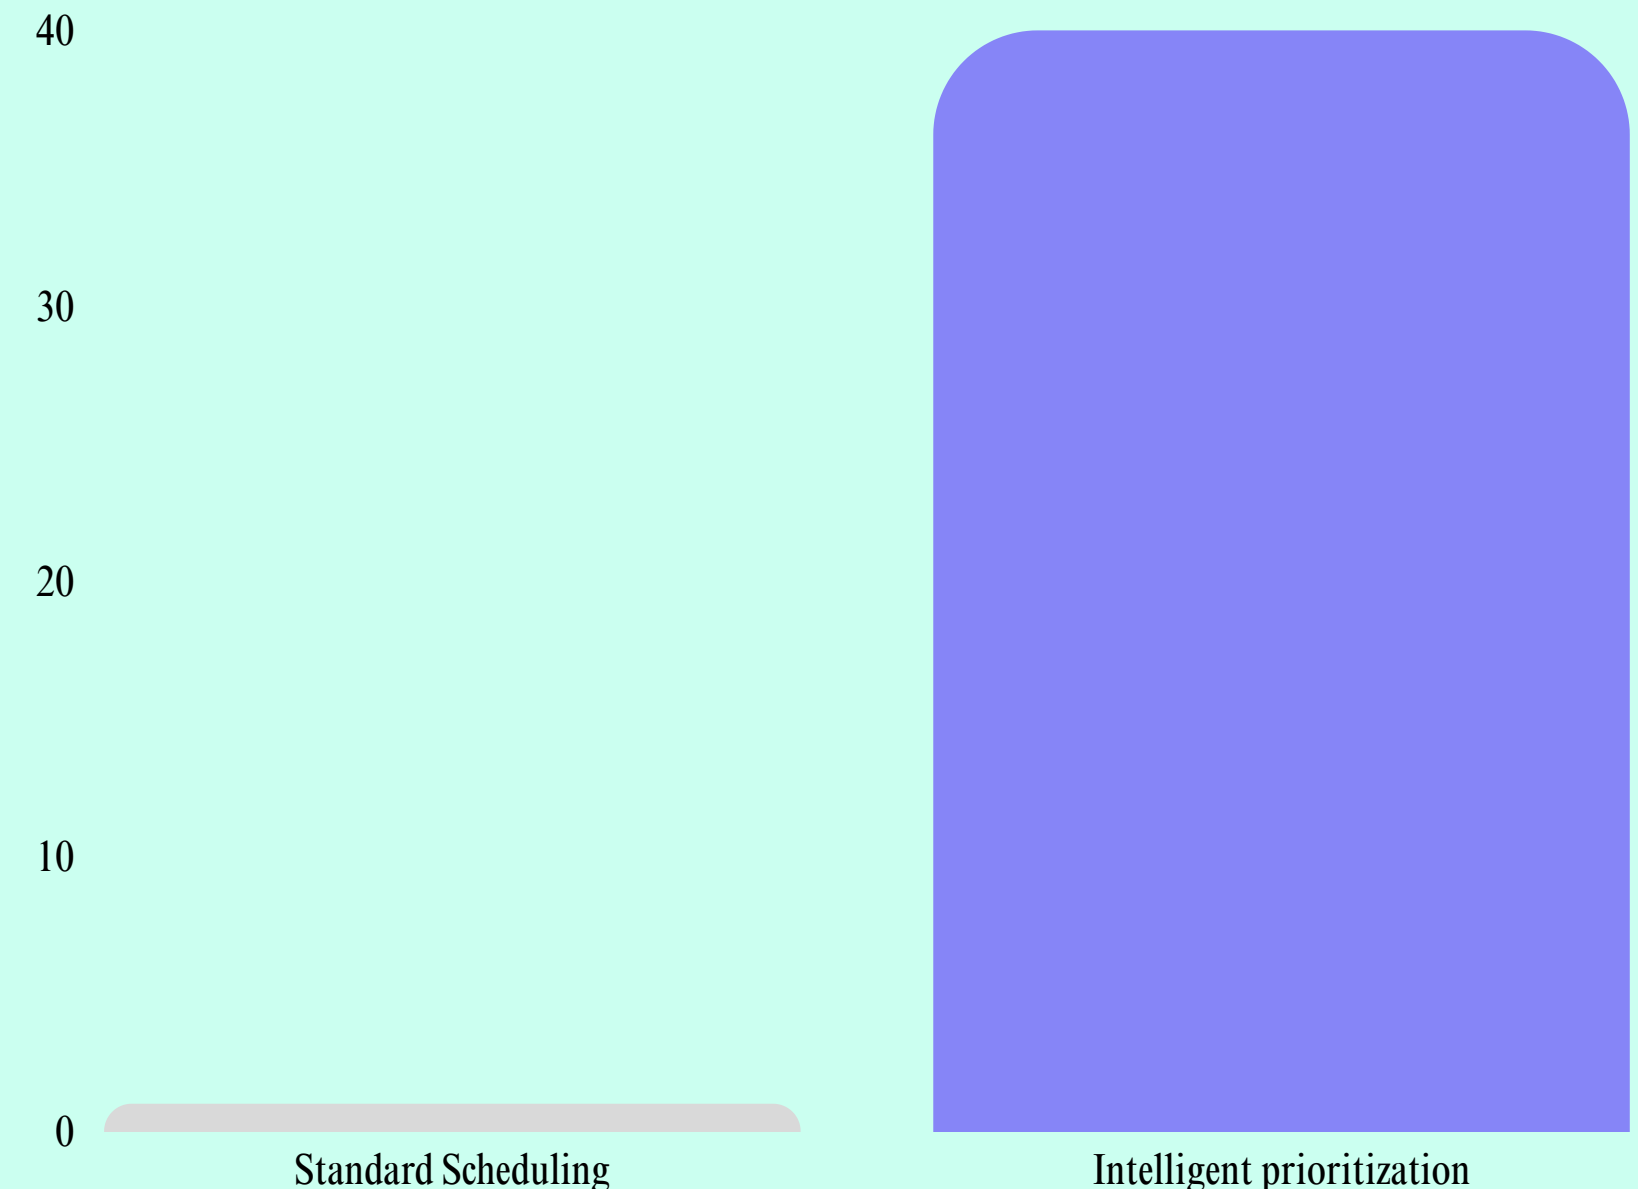

In two weeks since inception we have

97.5% reduction in patient harm events vs. standard scheduling

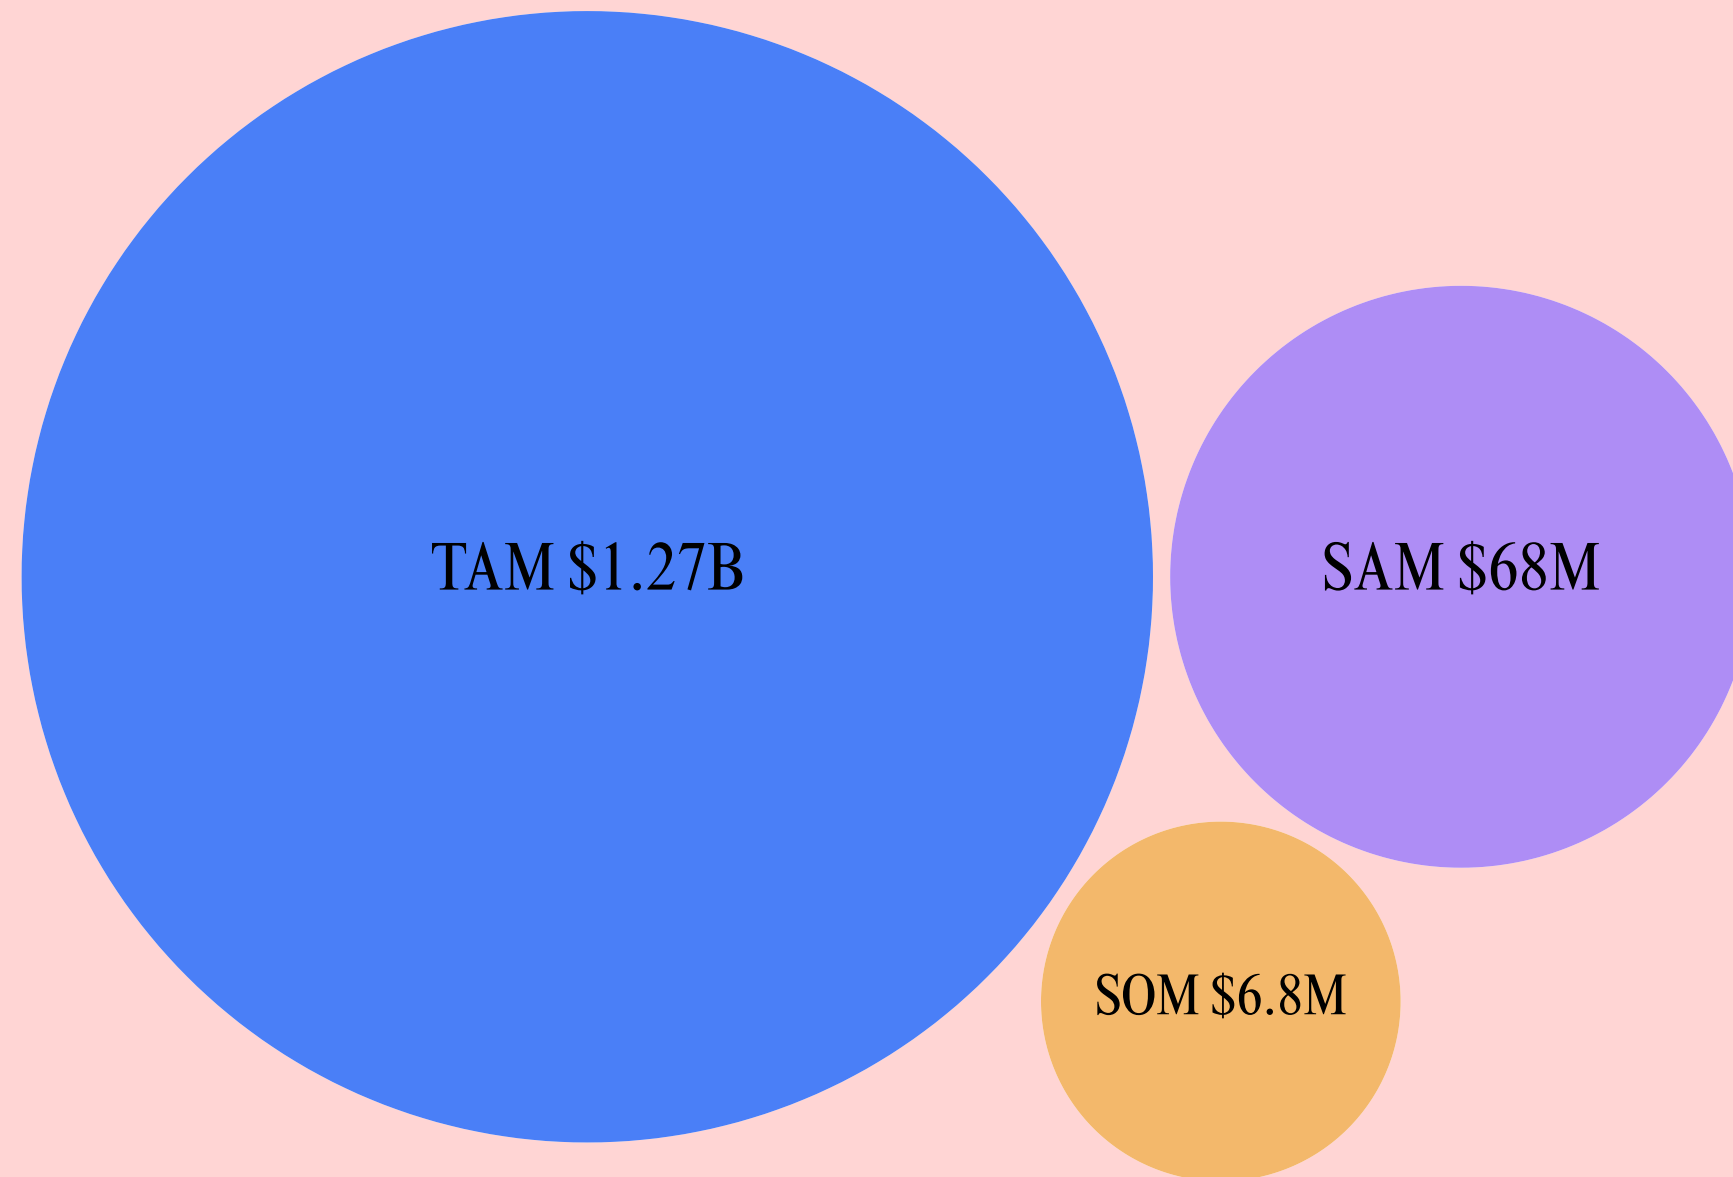

Early modeling demonstrates that urgency-based scheduling reduces harm events compared to traditional first-in, first-out queues.

Outreach underway

Outreach initiated to practicing physicians and clinical researchers in New Mexico to validate problem severity and scheduling pain points. Responses pending.

Market Opportunity

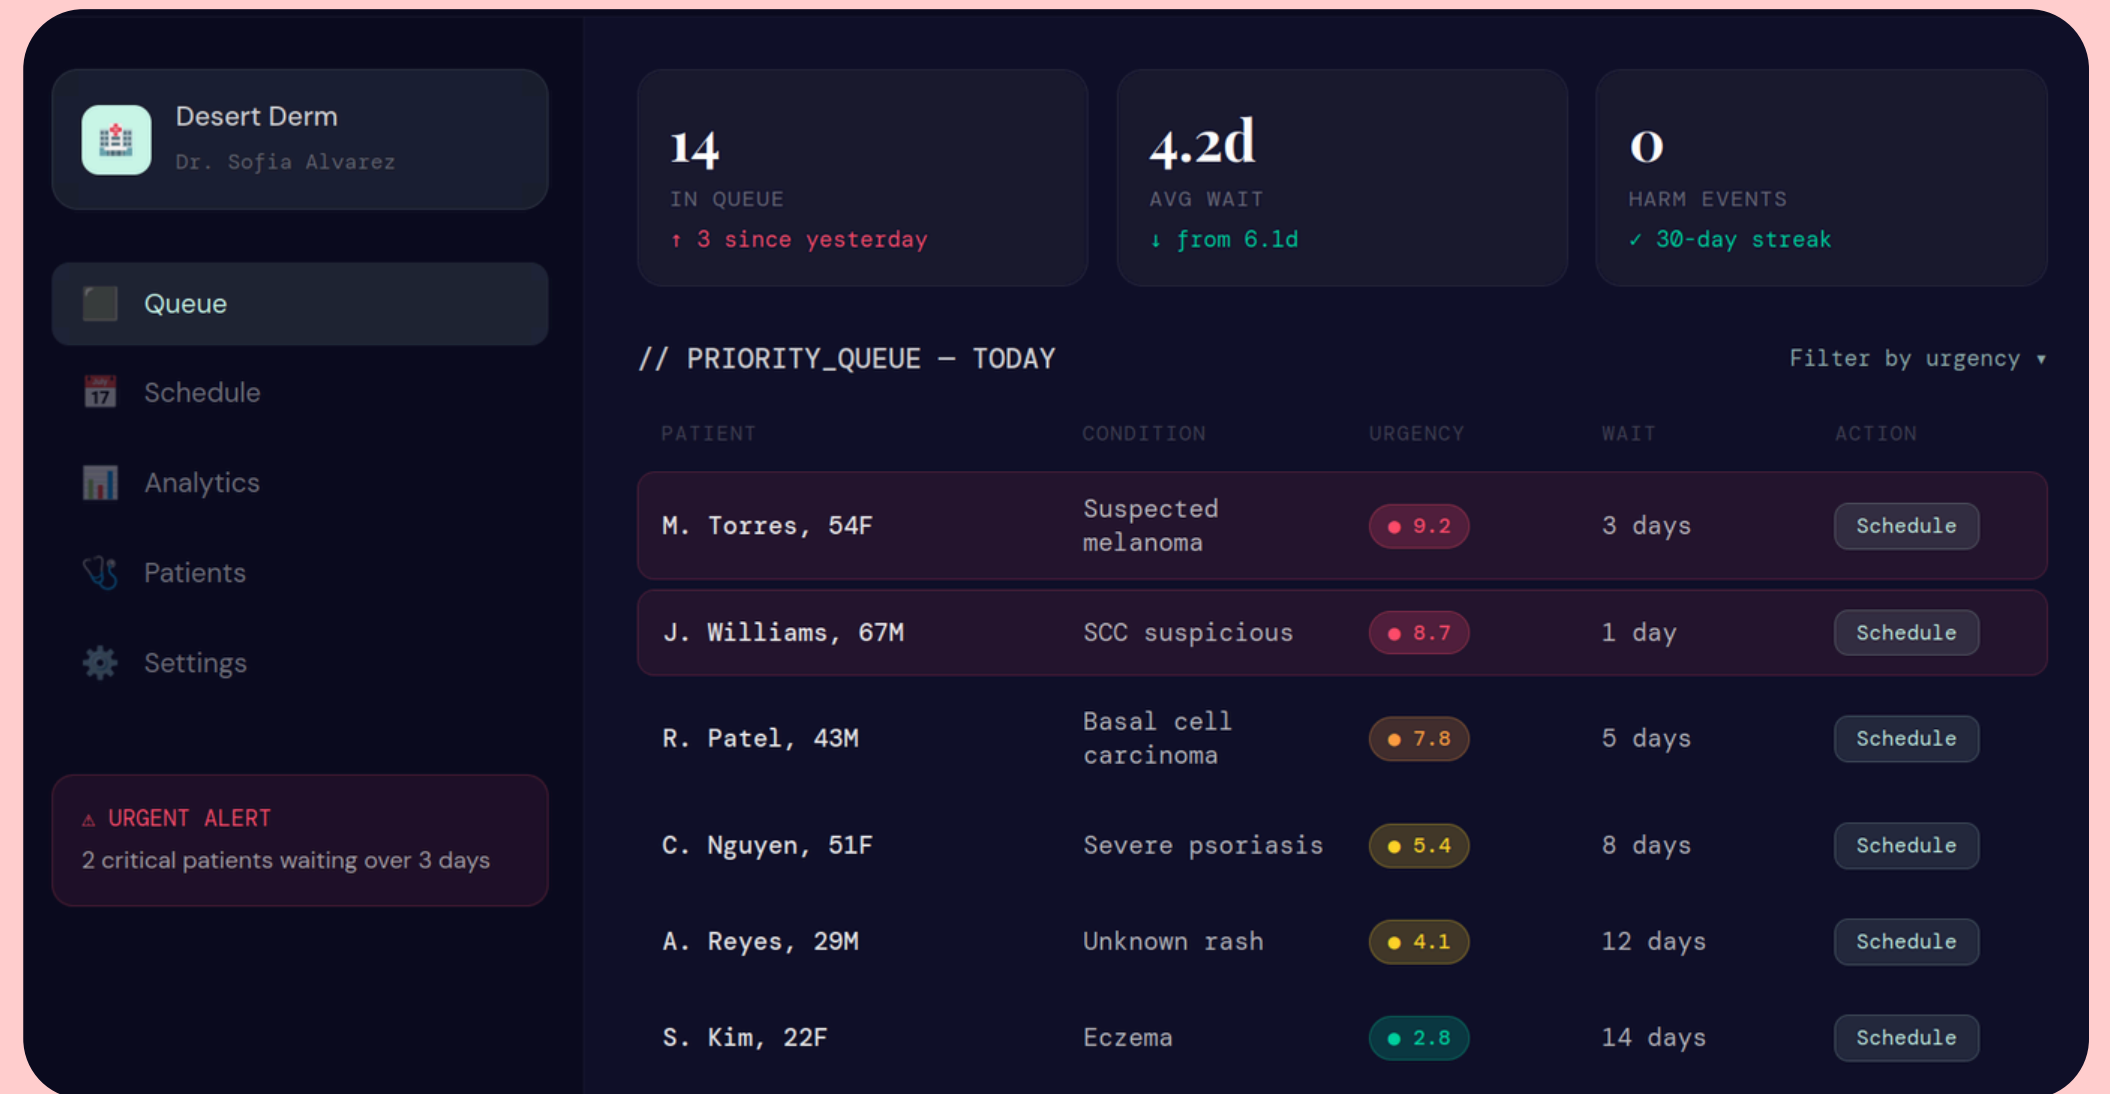

Why Now...

- **51%** of medical practices utilizing AI services
- **Physician shortages** are on the rise
- **~3787 derm clinics** in the US

TAM: All scheduled outpatient specialties, US, SAM: All US derm clinics, SOM:
SW derm clinics
